

Mobile app setup

- Android users can download the Audiobookshelf app [here](#).
 - In the server box, put <https://abs.mumquhar.com>
 - Use the login credentials you were given.
- iOS users must use the beta version, as the final version has yet to be released. You can check the status of the beta version [here](#).
 - Chances are the beta is full. You can try to wait and get lucky; spots open up occasionally.
 - The better option is to use a PWA (progressive web app)
 - To do that, open the Audiobookshelf website in Safari on your iOS device.
 - Click the 'Share' button.
 - Click the 'Add to Home Screen' button.
